

The state rule against the best schedule, review at 0.5 H (not the registered regime)

saving over the best schedule, % of retry's cost

..... no cap at all (step ii) - - - rule fitted here — rule fitted elsewhere

Positive: the rule is cheaper than step iii-b. Points: 95% intervals for the transferred rule at \$25, \$100 and \$300 an hour (100 replicates, refitting inside each), scaled by the point value of step ii. Below about two attempts the dotted line leaves the frame: there, not capping at all costs far more than the schedule. † Qwen3 Coder's dollar figures rest on an imputed price (PLAN.md Section 10).
